

The Eco Tank, a unique Slovak invention, was unveiled at its worldwide premiere in Stuttgart

Bratislava, 22 June 2016 – EcoTank - unique equipment to top-up windscreen washer fluid, designed by Slovak inventors Richard Vámoš and Juraj Saktor, was premiered at the UNITI EXPO trade fair in Stuttgart, Germany.

As one of more than 425 exhibitors from 36 countries, a Slovak company attracted attention with a unique solution to decrease the environmental burden and offer customers an intuitive and simple way of topping up windscreen washer fluid. Visitors from reputable companies were impressed by the design, original technology and business solution. EcoTank was designed as a standard for any filling station. Installation is simple, no structural changes are required, it is easy to use and there is no need for an operator at the filling station.

“UNITI EXPO trade fair offers the most sophisticated state-of-the-art solutions for filling station equipment and management. We have participated in this worldwide event for the first time and presented our unique solution for windscreen washer fluid top-up. EcoTank has generated interest from potential partners thanks to the technical solution and due to its environmental dimension. We believe that this will contribute to EcoTank soon becoming a standard at filling stations worldwide,” said Juraj Saktor, EcoTank CEO.

About EcoTank

There was one goal at the beginning of the EcoTank story: to help our planet be greener. We wanted to find a way to eliminate plastic containers and stop the creation of millions of tons of waste every year. Just as we do not buy fuel in plastic, soon we will not use plastic containers for windscreen washer fluid. These will be replaced by EcoTank, a unique ecological solution, and our goal is for it to become a filling station standard within 2 years.
